**Subject:** RE: Niagara falls Blvd. Site T&D of Rad waste streams

Stop the presses. Now start them up again. I have discussed the Army Corps option with different sources. The analysis is...we wouldn't save much more money and the time it would take would be greater. I wanted to tell you all as soon as I got that information back. I apologize for the pause in work but I didn't want anyone doing any more work on this until I was sure of our path.

We can continue efforts on creating the T&D Bid.

Thanks again

According to my EPA contacts, we will still need a T&D Coordinator to interact with the transporter/railroad and prepare the manifests.

**Subject:** Niagara falls Blvd. Site T&D of Rad waste streams  
**Importance:** High

Janelle,

Eric has been in contact with the Region and Remedial department concerning the T&D of the rad waste streams for the sites we have here. EPA is asking we stop our IFB development for the radiological waste streams as they intend to handle that directly through existing contracts they already possess and have in place for the Radiological waste streams. We may still have some roles and responsibilities that we will be filling in this T&D. This decision is being made based upon the cost savings that is expected to be experienced in taking this approach and should make the process a little easier, or at least that is what is expected to be the case. Call me if you wish to discuss.

Thanks.

**Kevin Shaver**
